

# Processed Animal Proteins are Permitted in Fishfeed!

On September 18, 2012, the majority the EU Member States approved the Commission's proposal to adjust the TSE regulation (EU) 999/2001 in regards to the feed ban of processed animal proteins (PAP) of non-ruminant origin.

The proposal provides the re-introduction of processed animal proteins (PAP) – manufactured under certain conditions of non-ruminant origin – to aqua feed. Bilateral agreements will be maintained and / or modified accordingly.

The regulation will be officially published by December 2012 and come into effect by July 1, 2013.

All proteins manufactured by GePro, including products under the GoldMehl®, Aquatrac® and C-Meal® range, are suitable for feeding fish and crustaceans.
